

11/04/2013
C49**SCHEDULE 2 TO THE ENVIRONMENTAL SIGNIFICANCE OVERLAY**

Shown on the planning scheme map as **ESO2**.

SITES OF BIOLOGICAL SIGNIFICANCE**1.0****Statement of environmental significance**11/04/2013
C49

The area covered by this schedule includes a range of sites of biological significance identified in '*Sites of Biological Significance in Knox – 2nd Edition*,' 2010. Their protection and appropriate management is of particular importance for the maintenance of both Knox's and Victoria's biodiversity. The area covered by this overlay is 26.83 square kilometres or 23.5% of the Knox municipality.

Knox values all areas of remnant and revegetated indigenous vegetation, there being less than 5% of the original cover remaining.

In this schedule, the term 'indigenous' refers to species that are native to Knox.

The extent and condition of many of the sites of biological significance is in decline. A key threat is development, mainly in the form of building, works and subdivision and the accumulation of many small decisions to clear vegetation.

The areas covered by this overlay include some of the most significant indigenous remnant vegetation in Knox. The indigenous vegetation along the waterways currently forms important riparian and wildlife corridors, providing protection to the waterway and to water quality. The indigenous vegetation on the slopes, particularly the higher or steeper areas, provides terrestrial habitat and land stability.

Significant attributes of this area (collectively) include:

- Remnant indigenous vegetation belonging to Ecological Vegetation Classes (EVCs) that are regionally endangered or vulnerable.
- Plant species that are threatened in Knox or more widely.
- Native fauna (including invertebrates) that are uncommon, rare or threatened in the Melbourne or wider area.
- Habitat features, such as tree hollows, food plants and even open pastures and grasslands that are used by uncommon, rare or threatened native fauna.
- Streams, wetlands (including ephemeral) and riparian vegetation that retain a natural ecological function, including habitat for native fish, platypus, waterfowl, invertebrates or other fauna.
- A role in dispersal of wildlife, pollen and plant propagules through acting as an ecological corridor or a 'stepping stone' in a network of sites.
- Large old indigenous trees that cannot be replaced in the short to medium term.
- Indigenous plants of exceptional size or age for their species.
- The value a less ecologically significant part of a site can contribute to more significant adjacent vegetation by:
 - Providing an ecological buffer.
 - Providing a buffer for bushfire safety to avoid ecological damage.
 - Providing management access.
 - Inhibiting the ingress of nutrients, soil, weed seeds and pests.

2.0**Environmental objectives to be achieved**11/04/2013
C49

- To protect sites of biological significance from:
 - Removal of indigenous vegetation that would be detrimental to the condition and viability of habitat, ecological communities, flora and fauna, genetic diversity or aquatic systems.

- Removal of dead or fallen trees where it would adversely affect native fauna.
 - Environmental weeds.
 - Fragmentation and loss of habitat, including small scale incremental losses.
 - Degradation and interruption to the continuity of indigenous riparian vegetation.
 - Alterations to the natural flow and temperature regimes of streams and wetlands.
 - Input of pollutants and excessive sediment or nutrients into streams and water bodies.
 - Changes in flooding patterns that may adversely affect indigenous flora and fauna.
 - Changes in topography that may impact negatively on vegetation or cause erosion or landslip.
- To reduce the threat of extinction to vulnerable, endangered or critically endangered flora or fauna in Knox.
 - To enhance the condition and viability of habitats, ecological communities, flora and fauna, genetic diversity and aquatic systems of sites, including both biological and physical components.
 - To maintain connectivity between sites of biological significance and indigenous vegetation.
 - To ensure buildings, works or subdivisions are compatible with the long-term protection and enhancement of biological significance.
 - To increase the extent and quality of indigenous vegetation, consistent with the goal of 'Net Gain' as set out in *Victoria's Native Vegetation Management – A Framework for Action* (Department of Natural Resources and Environment 2002) utilising the three-step approach of avoid, minimise and offset. Offsets are to contribute to the achievement of specified net gain targets within ten years.
 - To ensure offsets are located as close as practicable to the local catchment and plant/animal population areas impacted by vegetation loss. Preference is to be given to any reasonable option to locate offsets within Knox.
 - To provide for adequate bushfire protection measures that minimise adverse environmental impacts.
 - To provide appropriate fencing (temporary or permanent) to protect retained vegetation or aquatic environments from movements of machinery, vehicles or heavy foot traffic.

3.0

Permit requirement

11/04/2013
C49

Buildings and works

A permit is not required:

- For the construction of a building or the construction or carrying out of works in association with:
 - Roadworks.
 - Dependent Persons Unit.
 - Domestic Swimming Pool or Spa and associated mechanical and safety equipment.
 - Pergola which increases a building's footprint on the site.
 - Deck which increases a building's footprint on the site.
 - Alterations to an existing building or carry out ancillary works.

that does not either:

- Result in excavation or filling within the tree protection zone of vegetation that would require a permit for its removal, destruction or lopping.

- Result in excavations or filling greater than one (1) metre in depth.
- To carry out works necessary for normal maintenance of artificial stormwater treatment ponds (except where works and/or associated vegetation removal exceed one hectare in area, or where machinery access would result in damage to remnant indigenous vegetation).
- To undertake development or works that form part of a management plan approved by the responsible authority to enhance the site's biologically significant attributes.

Vegetation

A permit is not required to remove, destroy or lop vegetation that is:

- Not indigenous within Knox (e.g. Victorian species of Boronia or Grevillea).
- A tree with its trunk within two metres of the main roof structure of an existing building used for accommodation (excluding a fence).
- A tree overhanging the roof of a building used for Accommodation, excluding outbuildings and works normal to a dwelling. This exemption only allows the removal, destruction or lopping of that part of the tree which is overhanging the building consistent with the Australian Standard® AS 4373 – 2007, 'Pruning of amenity trees'.
- Grass within a lawn, garden or other planted area and is to be mown or slashed for maintenance only.
- Grass within existing pasture and is to be cut or grazed.
- The minimum amount necessary to maintain a Minor utility installation in accordance with a current signed Memorandum of Understanding between Knox City Council and the relevant service provider.
- Required to be removed for normal maintenance of artificial stormwater treatment ponds (except where the vegetation removal and/or associated works exceed one hectare in area, or where machinery access would result in damage to indigenous vegetation).
- Seedlings or regrowth less than three years old and the land is being maintained for established pasture, crops or garden.
- Woody plants on an existing dam wall.
- For maintenance pruning only and no more than 1/3 of the foliage of any branch is removed from any individual plant. This exemption does not apply to:
 - Pruning or lopping of the trunk of a tree or shrub.
 - Vegetation within a road or railway reserve.

4.0

Application requirements

11/04/2013
C49

All applications

Where the responsible authority considers the proposal may impact the environmental objectives of this schedule an application should be accompanied by a report covering the following information to the satisfaction of the Responsible Authority:

(a) A site plan (drawn to scale and dimensioned) showing:

- Property boundaries.
- The nearest road(s).
- Existing and any proposed fences.
- Existing and proposed buildings and works, including any proposed subdivision boundaries.
- The location, species, extent and type of all existing indigenous vegetation, habitat, threatened communities and threatened EVCs on the site, including dead or fallen vegetation.

- The location, species and extent of all indigenous vegetation to be removed, destroyed or lopped, including trunk girth, height and condition of trees.
 - A Tree Protection Zone around large trees generally in accordance with Australian Standard® AS4970 – 2009, ‘Protection of trees on development sites’.
 - The location of all watercourses, water bodies, hydrology or other features of environmental significance.
- (b) State the population sizes of any indigenous plant species affected by the proposal that are vulnerable, endangered or critically endangered in Knox or more widely.
- (c) The habitat value of any affected indigenous vegetation to fauna.
- (d) Any additional flora and/or fauna surveys and assessments undertaken.
- (e) An assessment of the potential impact of the proposal on the indigenous vegetation, including an indication of measures adopted to minimise the potential impact and where any adverse effects cannot be avoided, an explanation why.
- (f) Where adverse affects cannot be avoided any proposed offsets to be provided under the three-step approach required by *Victoria’s Native Vegetation Management – A Framework for Action* (Department of Natural Resources and Environment 2002).
- (g) Any bushfire protection measures to be provided and how this is to be achieved with no, or minimum, adverse environmental impact.
- (h) The impact of the proposal on the environmental values of the site and surrounds over a ten year period.
- (i) An arborist’s assessment of any trees which are proposed to be removed for safety reasons.

C49

Decision guidelines

Before deciding on an application, the responsible authority must consider as appropriate:

- The type, extent, quality and conservation significance of any indigenous vegetation.
- Whether the proposal adopts appropriate siting, design and management measures to avoid, or at least minimise, any adverse impacts on indigenous vegetation, habitat values, hydrology and land stability.
- The results of any survey/assessment of the biological values (flora or fauna), taking into consideration when the survey/assessment was undertaken, seasonal conditions and whether it was undertaken by a suitably qualified person.
- The conservation requirements of any threatened species, ecological community or EVCs on the site.
- Whether the loss of indigenous vegetation will be offset and whether such an offset can be provided within Knox. In addition, whether any long term protection measures will be provided for the offsets.
- Whether the proposal contributes to the ecological restoration or enhancement of the site, including the practicality of measures proposed to collect seeds and/or propagules or to translocate individual plants and any actions required to re-establish these species in a more secure location.
- Whether development has been designed to avoid locating buildings or services within the Tree Protection Zone of retained large trees generally in accordance with Australian Standard® AS4970 – 2009, ‘Protection of trees on development sites’.

Bushfire Protection

- Whether any bushfire protection measures are necessary and adequately justified.
- Whether the proposal, including proposed replantings, will result in an increase in bushfire risk to life and property and if so, whether there are more suitable alternatives.

- Whether the proposal has been appropriately sited so as to reduce the bushfire risk.

Whether the bushfire protection measures are designed so as to minimise ecological damage while still achieving the fire safety objective.

Subdivision

- For subdivision applications, the need to specifically address or vary:
 - Lot sizes.
 - Lot boundary alignment and layout.
 - Road network and driveway access.
 - Open space.
 - Building envelope or building exclusion areas.
 - Drainage or effluent disposal sites.

to better protect the significant biological values of the site.
